# ULTRA WOOD

**STYLE IS A CHOICE**

**MODERN INNOVATION  
MAKES THE OPTIONS  
EVEN BETTER**

## OUR QUALITY IS YOUR PEACE OF MIND

***Introducing our NEWEST highest-performing, most sustainable timber venetian range yet, ULTRAWOOD.***

Not all blinds are created equally when it comes to heat and humidity - and some can be prone to warping and cracking - so the choice is yours to make and can have a massive effect on your family's comfort and your window furnishing's longevity.

Manufactured using Industry-Leading Technology, this expanded Wood Fibre Polystyrene Composite can withstand temperatures up to 65 degrees Celsius without bending or losing integrity.

Ultrawood does not absorb moisture making it highly suitable for wet and humid areas including kitchens and bathrooms. Additionally, providing a robust, low-maintenance and easy to clean solution.

### **SMOOTH OPERATION**

The unique composition of Ultrawood allows for enhanced usability and efficiency. The lighter blade design makes for easier operation, particularly for the elderly who aren't afraid to try new technology when they see a clear benefit. This can be further enhanced by adding the convenience of motorisation which can easily tilt, raise or lower your blinds using a remote or smart device.

### **ENVIRONMENTALLY FRIENDLY**

Ultrawood is made of ecofriendly materials to deliver the best possible quality. We believe that it offers a unique experience using the natural beauty of wood and its warmth with durability to make your windows a real fashion statement.

*Ultrawood Venetian Blinds provide high-tech design. Functional yet elegant, we offer 50mm and 65mm blade widths. These timbers offer a unique composition that add an understated touch of sophistication to any interior.*
